

COURSEWORK FEEDBACK:  
A FUNCTIONAL PROGRAM  
2127935

CS141

February 2022

This document lays out your scores and commentary feedback for the second coursework of CS141 Functional Programming.

|                 |       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|-----------------|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Ingenuity       | 40/40 | <p>The program implements a faithful version of Five Nights at Freddy's.</p> <p>This is an absolutely amazing recreation of Five Nights at Freddy's! Your game plays exactly as one would expect the game to play and it is very fun to try and survive the night. The animations and jumpscare are handled very well. Audio would be a nice feature to have, but this work goes well beyond the expectations for a first-year functional programming student.</p>                                                                                                                                                                                 |
| Code Quality    | 30/30 | <p>You have a comprehensive amount of code and it is great that you have stuck to best practices throughout your codebase. The State monad is a very appropriate abstraction to use here and you have used it very well. You have made excellent use of Gloss and functions from the standard prelude.</p>                                                                                                                                                                                                                                                                                                                                         |
| Documentation   | 30/30 | <p>Your report includes all the required sections from the coursework specification and clearly discusses the challenges you faced when implementing this work and what you could improve upon in the future (e.g. adding Foxy or audio). Your design and architectural choices are well explained and it is clear that you understand how the <code>play</code> function from Gloss and how the State monad work.</p> <p>It is also excellent that you have managed to document a large codebase and thoroughly explain how your functions work and how they make use of library functions (both from Gloss as well as the standard prelude).</p> |
| General Comment |       | <p>This is an excellent submission that shows you can write fun programs in Haskell that make use of advanced functional programming techniques as well as best practices. Your report is well-written and your code comments are very thorough. It would be nice to see additional features (such as audio) to make your program more faithful to the original Five Nights at Freddy's, but this work already goes beyond what we expect for a first-year functional programming student. Well done!</p>                                                                                                                                          |
